

CONSTRUCTION MANAGEMENT PROFESSIONAL CERTIFICATE

Available and Open for Enrollment

Advance in the High-Demand Field of Construction Management

Prepare to enter the rapidly growing construction management field with the Construction Management Professional Certificate. In just 20 weeks, this non-degree certificate program will provide the skills needed to oversee construction projects and the expertise to handle logistical problems.

Developed with guidance and assistance from current industry leaders, the program provides relevant training for those seeking an entry-level job in construction project management while providing a foundation in construction fundamentals, inspection, safety, written and verbal communication, and other high-demand skills.

Get Started

If you're ready to make the most of online learning and become a leader in the construction management field, there's no better time to enroll and earn your professional certificate.

Certificate Modules

To earn your certificate, you will need to complete four modules:

- **Module 1: Plans and Specifications**
Understand the fundamentals of mechanical and electrical drawings, surveys, and bidding procedures
- **Module 2: Field Inspection and Safety**
Learn to assess the relationship between safety and quality, and understand management systems to improve safety
- **Module 3: Scheduling and Control**
Develop an understanding of project estimating and scheduling fundamentals, and learn to manage contracts and delivery methods
- **Module 4: CMAA CMIT Level 1 Exam Preparation and OSHA 10-hour Credential Review**

The Construction Management Professional Certificate program is beneficial to individuals looking for an entry-level position in the growing field of construction management, where a blend of technical and leadership skills are in high demand.
